

## FESPA 23 - 26 MAY 2023, MUNICH

At FESPA, the Folex group of companies will be showing its current range of products in the fields of LFP media, in advertising applications and textile transfer. Highlights include the [DIALUX SI 129](#) backlit film based on post-consumer polyester, with which resources can be finally saved in the production of lightbox advertising.

There is also good news for environmentally conscious advertising technicians and painters in the area of paint stencils: the products from the REGUsign series for tarpaulin, vehicle and facade lettering have received an update and are now based on papers from sustainable forestry. So instead of PVC film, paper can simply be used for the painting jobs with a clear conscience and perfect results.

In the case of textile transfer films, the development is also moving in a more sustainable direction: the products in the Folatrans series are low in pollutants and, in combination with the optimal inks, provide the basis for corresponding certifications. The Folex range also includes self-adhesive specialities for glass decoration and interior design.
