

## DIALUX® ANTI-GRAFFITI FILM OFFERS BETTER PROTECTION AGAINST THE COMMON VANDAL

Dear ladies and gentlemen, dear friends of Folex,

graffiti and acts of vandalism are unfortunately too common an occurrence around the globe. Sadly, often the last thing it looks like is anything like attractive "art" and is very costly to repair and make good again.

If you want to protect a variety of surfaces against vandals in a more pro-active way then here is a great solution. [DIALUX® Anti-Graffiti Film](#) specially developed by our in house R&D scientists utilises our hard-coat technology & provides unbeatable resistance against many forms of attack. The coating offers outstanding scratch resistance & protects against spray paints and other forms of typical vandalism on glass and other smooth surfaces.

The optically clear treated 80-micron polyester film is easy to install and has an outdoor durability of 5 years as well as being resistant to many chemicals and easy to clean. The reverse side has a clear adhesive layer for easy application.

Ideal for high traffic areas with product displays, retail, transit, vending machines & museums to name just a few. Available in rolls 1370 mm x 50 m, for more info contact [Simon Warren](#).
