

FROSTED FILM FOR WINDOW GLASS, GUARANTEES PRIVACY IN ANY OFFICE OR HOME

Dear ladies and gentlemen, dear friends of Folex,

traditionally creating, a window privacy effect directly onto glass was created with either sand blasting or a glass etching process, which could be expensive & time consuming. Now with the use of [REGU®sign Frosted Dry Apply film](#) it can be easily applied directly onto any existing office & home windows.

The matt translucent 80-micron PVC self-adhesive film is simple to install and can be primarily applied dry to the glass surface, due to special air channels which reduce air bubbles. However, the film can even be wet applied if this is the preferred method of application, due to the non-yellowing solvent resistant adhesive layer. The film also offers good resistance to glass cleaners.

[REGU®sign Frosted Dry Apply film](#) has the additional benefit of being printable with solvent, latex & UV ink jet inks as well as traditional screen-printable inks to create additional effects such as images, patterns, text or logos. Finally, the film can be cut with common plotter cutters to create additional creative designs.

Ideal for offices or homes where you want to create a privacy “no see thorough effect” to windows simply & easily.

Available in rolls 1370 mm x 50 M, for more info contact [Simon Warren](#).
