

FOLEX AT LOPEC IN MUNICH 1 - 2 MARCH 2023 | HALL B0 | STAND 211

From March 1 to 2, LOPEC 2023 will take place in Munich. We invite you to visit us at our stand 211, hall B0.

Fofox will be presenting functional films for the printed electronics sector at LOPEC 2023. These materials include scratch-resistant, UV-blocking, UV-stabilised and conductively-coated substrates for mobility and smart living applications, for example.

We are showing various interesting prototypes, including a coated and a printed TAC film (cellulose triacetate) – these films are made from a renewable raw material.

We will also show systems for the transfer or application of printed electronics for wearable applications onto textiles and films for heating applications. Fofox – also an OE-A member – will be showing products from the current product range and examples of coating services at the trade fair.

We look forward to your visit!
