

## FOLEX AT LOPEC IN MUNICH 6 - 7 MARCH 2024 | HALL B0 | STAND 218

From March 6 to 7, LOPEC 2024 – the international exhibition for flexible, organic and printed electronics – will take place in Munich. We invite you to visit us in hall B0 at stand 218.

Fofox will be presenting film products for use in printed electronics at LOPEC 2024. The focus is on the possibility of equipping products with additional functional properties, e.g. scratch protection (resistance), topographical embossing and UV protection.

You can use such films to protect your printed electronics, for example. From the current range of films for input systems, we will show you the ESSENTIALS range of functional films, which are already equipped with such properties as scratch resistance, anti-glare/anti-reflective or textured.

Samples with optically clear adhesives will also be shown, as well as substrates with conductive coatings.

We look forward to your visit!

Your FOLEX trade fair team
